S tem katalogom vam predstavljamo naš standardni program koles, katerega smo razvijali več let in vanj vnesli naše dolgoletne izkušnje. S stalnim izpopolnjevanjem in uvajanjem novih oblik ter z dvigom kvalitete skrbimo za naš sodoben in kvaliteten asortiman. Vse naše odjemalce bi radi seznanili z nekaterimi, za določitev kolesa važnimi podatki in jim tako pomagali pri pravilni izbiri posameznih vrst koles. Pri tej izbiri vam lahko pomaga tudi naša tehniška služba.

## RAZVRSTITEV KOLES

Osnovna funkcijska razvrstitev:

- kolesa brez vilic
- kolesa z gibljivimi vilicami
- kolesa s stabilnimi vilicami

Nadaljnje delitve glede na vrsto vleženja, obloge, platišča in pritrditve so razvidne iz posameznih tabel.

## NOSILNOST KOLES

Pri izbiri koles, glede nosilnosti morate biti pazljivi na naslednje točke:

- Namestitev koles na vozičku in določitev števila K.

$$\text{Obremenitev kolesa} = \frac{\text{teža tovora} + \text{teža vozila}}{K}$$

This catalog presents our standard program of castors and wheels, which we have been developing for years and where we have capitalized on our long-term experience. Constant perfection and introduction of new shapes and rising quality level guarantee the quality of our up-to-date assortment. On the following pages we would like to propose some technical definitions to help our consumers make the right choice of the most suitable castor or wheel according to purpose of use. Our technical service is always available for further information.

## CLASSIFICATION OF CASTORS AND WHEELS

Elementary functional classification:

- wheels
- swivel castors
- fixed castors

Further divisions as regards the type of the bearing, tread, wheel centre and housing are evident from the particular tabels.

## LOAD CAPACITY OF CASTORS AND WHEELS

When choosing wheels as to their load capacity the following must be considered:

- Positioning the wheels or castors on the vehicle (choose the number K according to the pictures).

$$\text{Load per wheel or per castor} = \frac{\text{weight of the vehicle} + \text{load to be carried}}{K}$$

Load capacities in the catalogue have been defined in line with the results of tests performed according to standard DIN EN 12527 Castors and wheels – Test methods and apparatus, these are values for dynamic load capacity at ambient temperature 20°C and other conditions detailed in standards for different purposes of use.

Depending on their purpose of use, castors and wheels are in conformity with one of the following standards:

- EN 840-5:2004 Mobile waste containers – Part 5: Performance requirements and test methods.
- DIN EN 12528:1999 Castors and wheels -Castors for furniture – Requirements.
- DIN EN 12529:1999 Castors for furniture – Castors for swivel chairs – Requirements.
- EN 12530:1998 Castors and wheels – castors and wheels for manually propelled institutional applications

- EN 840-5:2004 Mobile waste containers – Part 5: Performance requirements and test methods.
- DIN EN 12528:1999 Castors and wheels -Castors for furniture – Requirements.
- DIN EN 12529:1999 Castors for furniture – Castors for swivel chairs – Requirements.
- EN 12530:1998 Castors and wheels – castors and wheels for manually propelled institutional applications

- EN 12532:1998 Castors and wheels – Castors and wheels for applications up to 1,1m/s (4 km/h).
- EN 12533:1998 Castors and wheels – Castors and wheels for applications over 1,1m/s (4 km/h) and up to 4,4 m/s (16 km/h).

Večje dinamične obremenitve in trenutne preobremenitve zaradi:

- udarcev
- padcev
- hrapavih ali neravnih tal
- vožnje preko ovir
- višjih hitrosti
- bočnih obremenitev
- višjih oz. nižjih temperatur
- vplivov kemičnih snovi

je potrebno upoštevati pri izbiri kolesa. V teh primerih kolo ne sme biti obremenjeno do nazivne nosilnosti ali pa je potrebno izbrati kolo z večjo nosilnostjo!

## KARAKTERISTIKE POSAMEZNIH VRST LEŽAJEV

- **Drсни ležaj:** nezahtevno vzdrževanje, neobčutljiv na udarce, primeren za uporabo v vlažnih prostorih, za manjše hitrosti.
- **Valjni ležaj:** vzdržljiv, nezahtevno vzdrževanje, neobčutljiv na udarce, za manjše hitrosti.
- **Kroglični ležaj:** lahkotekoč tudi pri večjih obremenitvah in hitrostih, primeren za pogosto obratovanje.

## KARAKTERISTIKE KOLES IN OBLOGE KOLES

- **Guma + PASE :** miren tek in majhne vibracije pri transportu, upor pri vožnji manjši kot pri pnevmatiki.
- **Poliuretan obloga:** visoke nosilnosti, majhna obraba, miren tek, neobčutljiva na ostre kovinske delce, neodporna na vročo vodo in paro.
- **Pnevmatika:** izjemno dušenje udarcev in majhen odpor pri vožnji po neravnem terenu.
- **Poliamid in polipropilen:** neobčutljiv na mokroto in mnoge kisline, sorazmerno velike nosilnosti, primeren za gladka tla.
- **Bakelit + PATO:** visoke nosilnosti, temperaturna obstojnost do 270°C. Zelo primeren za peči in sušilnice. Bakelitna kolesa so omejena samo na uporabo po ravnih in gladkih tleh.
- **Litoželezna:** visoke nosilnosti, majhna obraba, visoka temperaturna obstojnost, slabša amortizacija udarcev.

## ELEKTRIČNA PREVODNOST

Glede na vaše potrebe izdelamo kolesa, katera so lahko:

- **električno prevodna:**  $R \leq 10^4 \Omega$
- **odvajajo statično elektriko:**  $R \leq 10^7 \Omega$

- EN 12532:1998 Castors and wheels – Castors and wheels for applications up to 1,1m/s (4 km/h).
- EN 12533:1998 Castors and wheels – Castors and wheels for applications over 1,1m/s (4 km/h) and up to 4,4 m/s (16 km/h).

Greater dynamic loads and temporary overloads due to:

- strokes
- falls
- rough or uneven floor
- rolling over obstacles
- higher speed
- side impacts
- higher or lower temperatures
- influence of chemical substances

have to be considered when choosing the right castor or wheel. In this case, the castor or wheel must not be loaded up to its nominal load capacity, otherwise you have to choose a castor or a wheel with a greater load capacity.

## CHARACTERISTICS OF SPECIFIC BEARING

- **Plain bearing:** simple maintenance, nonreactive to blows, suitable for usage in damp places, for slower speed.
- **Roller bearing:** persistent, simple maintenance, non-reactive to blows, for slower speed.
- **Ball bearing:** easy moved also at greater loads and higher speed, suitable for frequent operation.

## CHARACTERISTICS OF TYRE, TREAD OR SOLID WHEEL

- **Solid rubber tyre:** smooth run, small vibrations at transport, resistance while driving is smaller than with a pneumatic tyre.
- **Polyurethane tread:** large carrying capacity, small wear, smooth run, nonreactive to sharp metal splinters, irresistible to hot water and steam.
- **Pneumatic:** extreme damping of blows and little resistance on an uneven surface.
- **Polyamide and polypropylene solid wheel:** nonreactive to moisture and many acids, relatively large carrying capacity, suitable for smooth surfaces.
- **Phenolic solid wheel:** large load capacity, continuous temperature resistance up to 270°C. Very appropriate for bakeries and drying ovens. Phenolic wheels should not be used on an uneven floors (edges, obstacles) or rough floors.
- **Cast iron solid wheel:** large load capacity, small wear, very high temperature resistance, weaker damping of blows.

## ELECTRICAL RESISTANCE

In addition to the standard version, the following are available:

- **Conductive castor or wheel:**  $R \leq 10^4 \Omega$
- **Antistatic castor or wheel:**  $R \leq 10^7 \Omega$

### OBSTOJNOST NA TEMPERATURO

V katalogu definirane nosilnosti veljajo v temperaturnem območju **Tn**. Vendar pa je delovna temperatura **To** koles lahko višja ali nižja, pri čemer je potrebno upoštevati manjšo nosilnost koles. Nosilnost koles se spreminjanja sorazmerno s spreminjanjem temperature. Za nekatere materiale so dovoljene kratkotrajne višje temperature **Tt**, vendar je pri tem potrebno upoštevati manjšo nosilnost kolesa!

### TEMPERATURE CONSTANCY

Castors and wheels load capacity declared in the catalogue is valid in the temperature range **Tn**. The operating temperature range **To** for the wheels can vary, depending on a smaller load capacity. Load capacity is changing in accordance with temperature changes. Some wheel materials temporarily resist to higher temperatures **Tt**, but smaller load capacity has to be considered!

Materiali koles	Materials of wheels	Tn		To*		Tt*	
		T za predpisano nosilnost T for declared load capacity		Delovna temperatura Operating temperature		Kratkotrajna (10 min) višja temp. Temporarily (10 min) higher temp.

\* upoštevati manjšo nosilnost!

\*\* na željo uporabnika lahko nekatera kolesa izdelamo iz poliamida ali poliuretana za višje temperature.

\* considering smaller load capacity!

\*\* on customer's request some polyamide and polyurethane wheels can be made of high temperature material.

### POVRŠINSKA ZAŠČITA

Standardna površinska zaščita kovinskih delov koles je elektro opláčenje s cinkom s transparentno pasivacijo. Odpornost na korozijo je preverjana po standardu ISO 9227: 2006 - Corrosion tests in artificial atmospheres - Salt spray tests.

Ostale možnosti površinske zaščite so še elektro opláčenje s cinkom z rumeno pasivacijo, kromanje, kataforeza (črno) in lakiranje po definiciji RAL lestvice.

### SURFACE PROTECTION

Standard coating of metal parts of castors is electro-plated coating of zinc with transparent chromate conversion. Corrosion resistance is tested according to standard ISO 9227: 2006 - Corrosion tests in artificial atmospheres - Salt spray tests.

Other options are electroplated coating of zinc with yellow iridescent chromate conversion, chromium, cathaphoresis (black) and liquid coating according RAL definition.

### VAROVANJE PRED NESNAGO

Pri uporabi koles v tekstilni industriji ali v drugih prašnih prostorih, kjer se zadržuje prah in nesnaga, priporočamo kolesa s pokrovi.

### PROTECTION AGAINST DIRT

When using the wheels at the textile industry or in other premises where dust is present, it is advisable to use the wheels with treadguards.

## BARVA KOLES

Standardne barve koles so: črna in siva za gumi obroče, zelena in rdeča za obloge koles, natur bela in črna za kolesa iz plastičnih mas. Pri večjih naročilih se prilagajamo željam kupca.

## REZERVNI DELI

Rezervni deli vseh naših standardnih koles so vedno na zalogi. Pri posebnih izvedbah koles sledi dobava rezervnih delov po dogovoru.

## VZDRŽEVANJE

Občasno preglejte vse pritrdilne elemente in jih po potrebi zatišnite. Kolesa so med sestavo oskrbljena z mazivom za življensko dobo, v kolikor so v uporabi v normalnih pogojih in temperaturnem območju **To** (stran 7). Če so kolesa izpostavljena visokim temperaturam, jih mažemo z odgovarjajočimi mastmi. Kolesa s pnevmatiko po določenem času izgubijo predpisan tlak, zato jih je potrebno ponovno napolniti.

## NAROČANJE

Pri naročanju navedite identifikacijsko (5-mestno) številko artikla, ki enoznačno definira izdelek. Posebne izvedbe koles po želji kupca se definira z opisom.

- Vse mere v katalogu so podane v mm!
- Dobave izvršujemo po prodajnih pogojih, ki so sestavni del našega cenika.
- Prepovedan je ponatis kataloga brez našega dovoljenja.
- Pridružujemo si pravico do tehniških sprememb brez predhodnega obvestila!
- S tem katalogom koles postanejo vse prejšnje izdaje neveljavne.

## COLOUR OF WHEELS

Standard colours of wheels are: black and grey for tyres, green and red for treads, natural white and black for solid wheels. With larger orders, colours can be adapted in line with customer's request.

## SPARE PARTS

Spare parts for our standard wheels are always in stock. At special production of wheels the deliveries of spare parts follow as agreed.

## MAINTENANCE

A periodical control of all housing parts is required, as well as their tightening-up when necessary. Castors and wheels are for life greased when assembled if used in normal conditions and within temperature range **To** (see page 7). If the wheels are exposed to high temperatures, they are lubricated with the corresponding grease. Pneumatic wheels lose some pressure after a while so they need to be filled up again.

## ORDER

When ordering, please state identification (5-digit) number of article which uniquely defines the product. Castors and wheels for special requirements according to customer's needs must be defined by alphabetic description.

- All the dimensions are in mm!
- We make deliveries in line with the sales conditions, which are a constituent part of our price list.
- Reprinting this catalog is not allowed without our consent.
- We reserve the right to make any technical change without prior notice.
- Upon the publication of this catalog, all previous editions become invalid.

Posebne izvedbe koles kot variacije na standardna kolesa razvijamo po željah kupcev. Posebne izvedbe varirajo v sistemu zaviranja kolesa ali prirobe (smerna zavora), širine vilic, vgradne višine, dimezije prirobe, lastnosti materialov kolesa, nosilnosti ...

The special solutions as variations of standard castors upon consumer requirements can be developed by given technical description. Special castors vary in braking, locking system (directional locking device), fork width, overall height, top plate dimensions, material properties, load capacity...

NAŠA KOLESA SO SESTAVLJENA  
IZ ŠTIRIH RAZLIČNIH MATERIALOV:  
GUME, PLASTIKE, ALUMINIJA IN JEKLA.  
TE MATERIALE JE MOGOČE PONOVRNO UPORABITI,  
ZATO VAM PREDLAGAMO,  
DA ODSLUŽENA KOLESA ODDATE  
ZBIRALCEM SEKUNDARNIH SUROVIN.

OUR WHEELS AND CASTORS  
ARE MANUFACTURED BY FOUR RECYCABLE MATERIALS:  
RUBBER, PLASTIC, ALUMINIUM AND STEEL.  
ALL OF THEM CAN BE REPRODUCED,  
SO WE PROPOSE FOR ALL UNNSSED WHEELS AND CASTORS
